

Presentation  
of our Company's  
strengths

Chi siamo  
50 years of experience  
in the construction  
of industrial pressing systems

**Since 1975, we have been designing and manufacturing**

- Industrial presses
- Automated pressing lines
- High-performance hydraulic systems
- Custom-made integrated lines

**Certified industrial reliability over time**

Certified quality  
system

**Operiamo secondo standard internazionali**

- ISO 9001 certification – quality system
- ISO 3834 certification – structural welding
- ISO 45001 certification – occupational safety (pending)
- Company registered in the register of Historic Brands of National Interest (pending)

**Guarantee of:**

- Quality control
- Construction reliability
- Operational safety
- Repeatability of production processes

Complete in-house  
technical structure

**We design all the main plant disciplines in-house**

- Machine operating software
- Hydraulic systems
- Electrical systems
- Mechanical press structures

**Customer benefits:**

- Reduced development times
- Greater integration between subsystems
- Truly customized solutions
- Single technical contact

**To be considered compared to less structured competitors**

Specific expertise  
in pressing systems

**Experience in**

- Structures subject to high static and dynamic loads (3D FEM processing by solid edge)
- High-pressure hydraulic circuits
- Precise control of pressing force
- Flow dividers
- Integrated line automation

**Long-term reliability even  
with demanding production cycles**

In-house developed  
software

**We have in-house software developers  
dedicated to the systems**

**This allows:**

- machine cycle optimization
- advanced pressing control management
- integration with automatic lines
- interfacing with customer systems
- expertise in NIS2 cybersecurity regulations
- faster support over time

**Many competitors outsource this activity**

## In-house hydraulic design

### **It is a crucial element in the press industry**

#### **We design in-house:**

- Hydraulic units
- Power circuits
- Pressure control systems
- Cylinder synchronization systems

#### **Advantages:**

- Greater reliability
- Greater precision
- Reduced plant downtime

## Commissioning performed by in-house personnel

### **Commissioning is performed directly by our technical team**

#### **It means:**

- Complete machinery knowledge
- Reduced start-up times
- Parameter optimization directly in the field
- Qualified technical support

#### **This is a big and great difference**

## Continuous investment in skills

### **Over 1,500 hours of training each year**

#### **Training:**

- Specialized techniques
- Mechanical and IT safety
- Regulatory updates: Machinery Regulation 2023/1230 (EU), effective January 20, 2027
- New technologies: artificial intelligence

#### **Result:**

**Staff constantly trained on complex industrial pressing systems**

## Reduction of project risk for the customer

### **Thanks to our internal structure, we guarantee**

- Integrated multidisciplinary design
- Direct control of critical phases
- Complete order management
- Reduction of critical issues during the start-up phase
- Technical continuity over time

#### **This is often the decisive factor in choosing a supplier**

## Competitive Value Summary

### **Why choose our Company**

- 50 years of experience in the press industry
- Certified quality system
- Complete in-house engineering
- Proprietary software
- In-house hydraulic design
- Direct commissioning
- International certifications
- Continuous staff training

#### **Result:**

**Greater system reliability and greater investment security**

**Customer testimonials:**
